financial crises happen time and again in post industrial economies and they are extraordinarily damaging building on insights gleaned from many years of work in the banking industry and drawing on a vast trove of data richard vague argues that such crises follow a pattern that makes them both predictable and avoidable a brief history of doom examines a series of major crises over the past 200 years in the united states great britain germany france japan and china including the great depression and the economic meltdown of 2008 vague demonstrates that the over accumulation of private debt does a better job than any other variable of explaining and predicting financial crises in a series of clear and gripping chapters he shows that in each case the rapid growth of loans produced widespread overcapacity which then led to the spread of bad loans and bank failures this cycle according to vague is the essence of financial crises and the script they invariably follow the story of financial crisis is fundamentally the story of private debt and runaway lending convinced that we have it within our power to break the cycle vague provides the tools to enable politicians bankers and private citizens to recognize and respond to the danger signs before it begins again

from 1819 to covid 19 200 years of american financial panics offers a comprehensive historical account of financial panics in america through a meticulous dissection of historical events and the benefit of his experience handling many of the country's

largest bank failures thomas p vartanian reveals why so many more devastating financial crises have occurred in america than nearly every other country in the world vartanian provides extensive evidence of how the collision of policy driven government actions and profit oriented business performance have disrupted market equilibrium and made the u s system of financial oversight less effective and more susceptible to missing the signs of future financial crises including policies that imposed tariffs and chartered dozens of poorly regulated uncapitalized state banks that facilitated panics in the 19th century created ambivalence over whether gold silver or paper money should be the preeminent form of payment creating the perfect conditions for the depression of 1893 kept interest rates low to assist the central banks in england germany and france allowing an overheated u s stock market to shift into overdrive and crash in 1929 planted the seeds of the s l crisis more than twenty years before when congress imposed artificial limits on deposit interest rates and the states capped mortgage interest rates to increase homeownership pressured banks in the 1990 s to increase mortgage lending to increase home ownership while the fed engaged in loose monetary policies adding fuel to the greatest economic crisis since the great depression 200 years of american financial panics dissects financial crises in a way not attempted before concluding that the pyramid of governmental oversight intended to foster economic safety and stability has been turned on its head to its detriment vartanian provides readers with a unique list of practical solutions most importantly his analysis of financial technology from artificial intelligence and big data to cryptocurrencies and quantum computing forecasts how financial markets and government regulation will change 200 years of american financial panics is a must read for anyone that wants to understand their money financial markets and how they are going to change in the future

this dissertation examines the short run impacts of the indonesian economic crises on different demographic outcomes of infants and women in the first chapter i examine whether the recent indonesian financial crisis and the 1997 1998 drought and smoke haze crises had adverse effects on infants birthweight and mortality in the second chapter i examine the effects of the 1998 economic crisis on the ages of female first marriages and first births this dissertation uses data from three waves of the indonesia family life survey ifls1 1993 ifls2 1997 and ifls3 2000 the methodology used in the first chapter is to compare health conditions of newborns of different birth cohorts the estimations of both neonatal and post neonatal mortality risks are carried out using multivariate regressions with socio economic control variables such as mother s education place of residence province community and gender of the child in addition mortality risks are estimated using hazard models to capture the

mortality risks at different ages in months the paper uses both nonparametric and parametric hazard models to estimate the hazard rates the effects of the crises on birthweights are analyzed using multivariate regressions and comparisons of birthweight cumulative distributions estimated results on mortality outcomes show that the financial crisis had adverse impacts on neonatal mortality in both urban and rural areas the adverse effects of the financial crisis on post neonatal mortality risks were larger and more statistically significant for urban infants than for rural infants the drought smoke crisis adversely affected post neonatal mortality risks in rural areas the estimated results show that rural infants born during the drought smoke crisis experienced approximately a 4.4 percentage points increase in their infant mortality risks 44 per 1 000 live births the magnitude of the effects almost doubled after controlling for community fixed effects none of the crises significantly affected birthweight i find that the lack of evidence on the adverse effects may be due to selection problems in reported birthweights in the second chapter effects of the crisis on ages of female first marriage and first births are estimated using hazard models the methods used include both parametric and non parametric estimations of the marriage and first birth hazards conditional and unconditional on being married estimated results indicate that overall there was an increase in the probability of getting married and a decrease in the probability of having first births among indonesian women during the crisis in both conditional and unconditional analyses these findings support the hypothesis that marriages of individuals in a household and delaying first births may have been used as income smoothing mechanisms in the time of the crisis results from this paper are not sufficient to draw any conclusion on why an increase in marriage probability and a delay in having first birth took place we speculate that women are more likely to get married during the time of the crisis to take advantage of economies of scale and specialization in household production and consumption the delays of first births might be due to a consumption smoothing consideration or other supply factors such as the separation of spouses when relocation of individuals occurred during the crisis
